## PROJETS

**TibetParis(Personelle project)**
An application that gives information on NGO and commercial establishment within ile de France. I used Django in backend which i learned during my internehip and React at front which i learned during my course with Konexio.
*Development languages:Django API, React ,Tailwind CSS*

**Moovice application (School project)**
An application that uses an API that allows you to discover the most popular movies and the releases of the week. It also allows you to choose a movie and save it in your favorites.
*Development languages: React (+hooks) Bootstrap*

**Memory game (School project in groups of three)**
The goal of the game is to find the right pair by clicking on a card. The game is won when all the cards are matched.
*Development languages: React (+hooks) CSS*

**Fullstack countries project (School project)**
An application called "countries", which allows you to search for a country by its name or its capital and see all the information about the country in the search result.
*FrontEnd : JavaScript et JQuery API: Express et Json*
